**WE ENABLE OPERATIONAL READINESS
OF YOUR NAVAL VESSEL.**

"We provide maintenance, modernisation and complete system integrations as turnkey solutions. Our aim is always to minimise shipyard downtime and increase operational readiness. In addition, we can offer OEM spare parts supply and logistics – especially for German and European manufacturers."

Martin M. Dassler, Managing Owner

Turbo-Technik was established as a ship repair company for voyage and port repairs of seagoing vessels. The family business was founded in Wilhelmshaven, Germany, in 1967 by Dietrich E. Dassler.

For the German Navy Turbo-Technik is a leading provider of repair, maintenance and technical upgrading services for surface combat ships and naval support vessels. We have independent and high-performing naval departments in Wilhelmshaven and Rostock, situated close to the German naval arsenals. Our well-trained employees fulfil the demanding safety and security requirements of this sector.

This ensures a high level of reliability in order to successfully assure the operational readiness of the German naval fleet.

We have an in-depth in-house manufacturing. Our capabilities extend to shipbuilding, pipe construction, mechanical engineering, electrical engineering, hydraulics and construction services.

Turbo-Technik is a leading provider of contract services for ad-hoc requirements, technical modifications and scheduled repairs of naval units. Our capabilities extend beyond the arsenal or base, with operations conducted worldwide during international missions. Our experience is a valuable asset to other shipyards, which have awarded us significant work packages.

Electrical work

Retrofit of Weapon systems

Installation, retrofit, service and maintenance of davits and other systems

Bowthruster service

Main and auxiliary engine works

Mechanical work, incl. pumps, gears, valves, etc.

Propeller and stern tube
